

RANGE PLAN

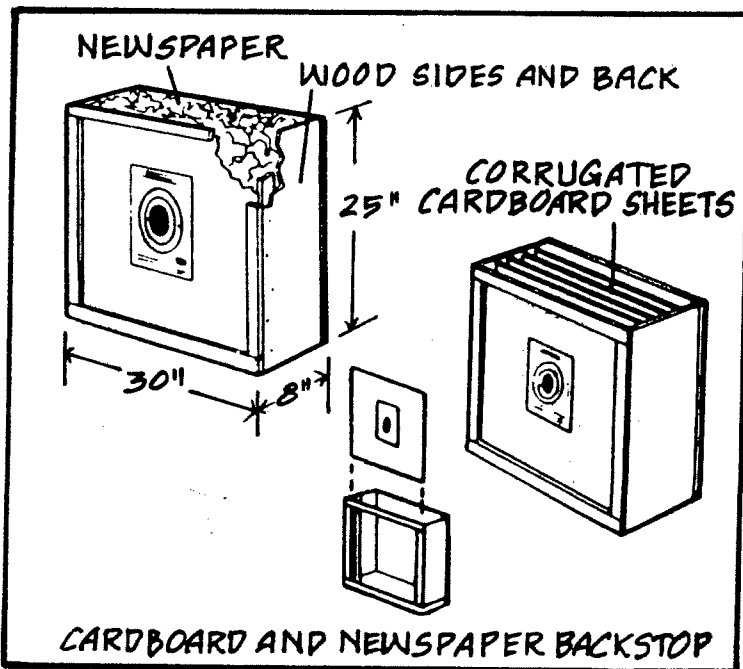

TARGET BACKSTOPS

A metal backstop very similar to commercial metal portable bullet stops. Excellent for home or club air gun use.

Fix Celotex to wood and to other pieces of Celotex with neoprene panel mastic. Do not use nails, except to hold pieces temporarily. Do not use any mastic other than neoprene base, such as the one distributed by U.S. Plywood under the brand name "Weldwood Panel Mastic."

A custom constructed box or just plain heavy duty cardboard packing box plus corrugated cardboard sheets and/or magazines are all that's needed for this backstop. If BB's are used, be sure to have corrugated cardboard rather than a magazine immediately in back of the target as BB's tend to bounce off of fairly hard surfaces.
